

Hangzhou Fushan Medical Appliances Co.,Ltd

Covering an area of 10,000 square meters, Fushan, as a manufacturer of medical appliances with standard purification workshop of class 100,000, was newly designed and constructed totally in accordance with GMP standards and requirements, equipped with leading international production and testing machines of silicone products. Our company has 18 senior engineers and technicians, and among them 4 people have got master degree or Advanced Professional Title.

In order to keep pace with world's top level in manufacturing medical devices, our company imported advanced liquid-injection molding machine system from France, which broke through the production bottleneck of high-quality implanted products. We also have brought in a large Ethylene Oxide Sterilization Cabinet which meet CE standard, to ensure the safety of sterile products, and to provide accurate verification reports.

Fushan formally put into operation in November 2006 with initial investment 20 million RMB. Fushan specializes in researching and manufacturing various silicone and PVC disposable products and other electronic treatment equipments. We manage the company quality control system strictly according to ISO 13485:2003 and MDD93/42/EECx.V.3 and the company has got CE certificate and FDA certificate.

With the wide scope of business range including Silicon Foley Catheter, Microwave Catheter, Miniature Infusion, Silicon Reservoir and Silicone Drainage System, Infusion Pump, Laryngeal Mask Airway from the first generation to the fourth generation, SLIPA Airway, common and special infusion sets, High Frequency Electronic and microwave therapy apparatus, our company has developed into an enterprise group, consisting of the following Subsidiaries:
